Art Unit: 1713

DETAILED ACTION

1. The Amendment filed by Applicant on 02/17/06 has been entered.
2. Claims 23-30 have been canceled.
3. New claims 31-37 have been added.

Response to Amendment/Arguments

4. Applicant's amendment and arguments filed on 02/17/06 have been fully considered and they are found unpersuasive.

Claim Rejections - 35 USC § 112

5. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

6. Claim 20 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The Applicants recite "from within the reaction

Art Unit: 1713

mixture." There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 112

7. The following is a quotation of the first paragraph of 35

U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

8. Claim 20 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement.

The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The current amendment recites, "from within the reaction mixture from which said molecular sieve is formed." It is unclear to me that there is support in the specification the amendment. The examiner contends that the amendment language is not equivalent to page 5, lines 19-27 of the present specification.

Art Unit: 1713

Claim Rejections - 35 USC § 103

9. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this

Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

10. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

11. Claims 20-22 and 31-37 remain rejected under 35 U.S.C. 103(a) as being unpatentable over Lok et al., U.S. Patent No. 4,440,871 (hereinafter "Lok") in view of Davis, EP 0 463 793 A2 (hereinafter "Davis"). Lok teaches a silicoaluminophosphate composition and template. See Lok, Summary of Invention. The

Art Unit: 1713

present invention differs from Lok in that the present invention requires a polymeric base. Davis teaches in analogous art a crystalline aluminophosphate mixed with silicon and employed in olefin polymerization. See Davis, page 6, lines 23-26. In view of Davis, one having an ordinary skill in the art would be motivated to modify Lok by using silicoaluminophosphate composition and template in a polymer (oligomer). Such modification would be obvious because one would expect that the use of silicoaluminophosphate composition and template as taught by Lok would be similarly useful and applicable to the composition taught in Davis.

12. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

13. A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated

Art Unit: 1713

from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
